Available for full-time roles from Summer 2027

Education

National University of Singapore Aug. 2023 – Jun. 2027

Bachelor of Computing (Honours) in Computer Science, Minor in Data Analytics *Singapore*

- **Relevant coursework:** Database Systems, Computer Networks, Operating Systems, Software Engineering, Data Structures & Algorithms, Machine Learning

Experience

Software Engineer Intern May 2026 – July 2026

InterSystems *Singapore*

- Built a healthcare data integration platform on InterSystems IRIS, ingesting clinical data via CDC/Kafka and enterprise data via OData/OAuth2 through ObjectScript interoperability productions into a unified clinical data repository
- Developed an agentic RAG system over 2,000+ clinical documents using OpenAI, HNSW vector search and LangChain, served by a FastAPI microservice that returned grounded answers in under 3 seconds
- Deployed and debugged the InterSystems HealthShare AI Assistant across a multi-instance production VM, resolving runtime, configuration and namespace conflicts that had blocked the rollout

Cloud and Software Engineer Intern May 2025 – July 2025

Singapore Maritime Institute *Singapore*

- Built and administered a secure Microsoft Azure environment of 10 virtual machines, enforcing network security policies and role-based access controls to isolate resources across multiple teams
- Developed an Azure AI chatbot integrated with internal databases and REST APIs, handling 200+ queries a month from around 30 internal users
- Designed a ferry timing web app using the Google Maps API to surface live ETAs for Marina South Pier and other ferry routes, replacing a manual timetable lookup (repo)

Information Technology Intern Feb 2023 – July 2023

My Healthcare Collective *Singapore*

- Designed user journeys and ran end-to-end testing for a Clinic Management System and Patient App, filing defects and workflow gaps that shipped as fixes
- Ran recurring feedback sessions with doctors, nurses and patients, translating findings into a prioritised improvement backlog for the IT team

Projects

OptiPlan | *React Native, JavaScript, Node.js, Express.js, PostgreSQL, Vercel* | live site NUS Orbital

- Built a full-stack productivity app in React Native and Node.js, structured as a modular monolith with self-contained service modules
- Implemented JWT authentication and cross-device data synchronisation for up to 50 users
- Shipped an event calendar, a reactive kanban board and an analytics module reporting productivity trends

MWH SmartMart | *React, TypeScript, Next.js, Node.js, MongoDB, Firebase* | devpost Hack4Good

- Built a voucher-based online mart in a 120-hour hackathon, using Firebase Auth for role-based access across beneficiary, staff and admin roles
- Designed backend routes with authentication middleware gating actions and functionality per role
- Added reporting and analysis views for staff to track voucher redemption and inventory

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, SQL (PostgreSQL), ObjectScript, HTML/CSS
Frameworks & Libraries: React, React Native, Next.js, Node.js, Express.js, FastAPI, Flask, LangChain, NumPy
Data & Infrastructure: PostgreSQL, MongoDB, Firebase, Kafka, Debezium (CDC), InterSystems IRIS, REST APIs, OAuth2/OData
Cloud & Tools: Microsoft Azure, Google Cloud, Vercel, Git, GitHub Actions, Postman, UIPath, Figma

Additional Information

Spoken Languages: Indonesian (Native), English (Native), Malay (C1)
Volunteering: Ember/Ace project (2021), Mission Remission fundraising project (2022)
